GEZE door closer systems – Versatile and reliable

Innumerable optical and technical options

As one of the world's leading suppliers of door technology systems, GEZE offers innovative solutions for door closer systems. GEZE products have always been developed around the needs of customers, therefore the company offers direct solutions for individual requirements – aesthetic, functional and economical.

Door closers from GEZE impress with their intelligent functionality, their high performance, and their long life spans, as well as the integrated design lines. GEZE's quality management system has been certified to ISO 9001. GEZE door closers have been inspected and certified in accordance with the applicable standards EN 1154, EN 1155 and EN 1158. Production of these products is regularly monitored by independent test institutes. All these measures guarantee the high quality of GEZE products.

At GEZE, comprehensive customer support and advice have top priority. From draft planning through execution to maintenance of the systems. First-class spare parts management supplements the range of services.

The new GEZE door closer TS 5000 Ecline: High access convenience and large closing force

With the new TS 5000 Ecline system, GEZE is taking a further step forward in the development of its door closers, and is bringing a completely optimised, innovative door closer to the market. It fulfills both fire protection and barrier-free building requirements. Doors with leaf widths of up to 1250 millimetres (EN5) can be opened easily with reduced force. In the case of emergency, the TS 5000 Ecline closes doors safely and reliably.

Visit www.geze.com/ecline for more detailed information about the new TS 5000 Ecline.

GEZE OVERHEAD DOOR CLOSERS WITH GUIDE RAIL

GEZE Overhead door closers with guide rail

Brief description of the variants

For single-leaf doors

Door closers for single-leaf doors with guide rails represent modern closing technology on every door. The wide range of GEZE door closer technologies ensures that there is a technical solution for every requirement, for example with electric hold-open device, with smoke switch control unit or with a free swing function. These products meet the DIBt guidelines for hold-open devices as well as the norms and standards, such as DIN EN 1154 and 1155, and also have a CE mark or a general building approval (DiBt).

TS 1500 G: Door closer with guide rail

The overhead door closer TS 1500 G with guide rail for single-leaf doors is particularly suitable for internal doors with door leaf widths of up to 850 mm and can be used for right and left single-action doors without conversion.

TS 3000 V: Door closer up to 1100 mm leaf width

The overhead door closer TS 3000 V is suitable for right and left single-leaf doors of up to 1100 mm and for installation on fire and smoke protection doors.

TS 5000 Ecline / TS 5000 L Ecline: Door closer with high access convenience and large closing force

These overhead door closers are suitable for barrier-free, easy opening single-leaf doors of up to 1250 mm leaf width (closing force EN5). They are the ideal system solution for barrier-free building and guarantee high access convenience thanks to the opening support integrated in the guide rail.

TS 5000 / TS 5000 L: Door closer up to 1400 mm leaf width

These overhead door closers for single-leaf doors represent clear lines. They are approved for use on fire and smoke-proof doors. Special version: GEZE door closer TS 5000 S with delayed closing action adjustable from the front.

GEZE OVERHEAD DOOR CLOSERS WITH GUIDE RAIL

TS 5000 E / TS 5000 L-E: Door closer with electric hold-open device

The electric hold-open device in the guide rail allows these overhead door closers to be adjusted continuously to an exact hold-open angle. When combined with an external smoke switch control unit (e.g. RSZ 6), the hold-open function is released in the event of a fire and the door closes safely.

TS 5000 EFS 3-6: Door closer with free swing function

The overhead door closer TS 5000 EFS for single-leaf doors is fitted with the free swing function. This enables people to go through the door by applying reduced physical force in the opening or closing direction once the door has been opened. When combined with an external smoke switch control unit, the electric free swing function is released and the door closes automatically in the event of a fire.

TS 5000 RFS 3-6: Door closer with free swing function and smoke switch control unit

The overhead door closer TS 5000 RFS for single-leaf doors is fitted with an integrated smoke switch and the electric free swing function. This enables people to go through the door by applying reduced physical force in the opening or closing direction, e.g. in homes for the elderly or hospitals, after the door has been opened once, e.g. in the morning. The electric free swing function is released by the integrated smoke switch control unit and the door closes automatically in the event of a fire.

TS 5000 R / TS 5000 L-R: Door closer with smoke switch control unit

These overhead door closers with electric hold-open device and integrated smoke switch control unit are approved for installation on single-leaf fire and smoke protection doors. In the event of a fire, the smoke detector triggers and the door closes automatically.

GEZE OVERHEAD DOOR CLOSERS WITH GUIDE RAIL

For double-leaf doors

The integrated closing sequence control (ISM) ensures the correct closing sequence of both leafs on double-leaf doors. When the door is closed, the active leaf remains in waiting position until the passive leaf is closed and releases the active leaf via the closing sequence control. The double-leaf door closer systems of the ISM series offer numerous specific setting options. Various versions, example with electric hold-open device, with smoke switch control unit or free swing function fulfil almost every requirement.

These products meet the DIBt guidelines for hold-open devices as well as the norms and standards, such as DIN EN 1154, 1155 and 1158, and also have a CE mark or a general building approval (DIBt).

TS 5000 ISM / TS 5000 L-ISM / TS 5000 L-ISM VPK: Door closer with closing sequence control

System solutions comprising two TS 5000 with adjustable closing force 2-6 in accordance with EN 1154, combined with the ISM guide rail, tested in accordance with EN 1158 and approved for fire and smoke protection doors.

For opposite hinge side standard or panic function on the active leaf only: TS 5000 L-ISM

For opposite hinge side full panic requirements up to X dimension 125 mm: TS 5000 L-ISM VPK

TS 5000 E-ISM / TS 5000 L-E-ISM / TS 5000 L-E-ISM VPK: Door closer with electric hold-open device

These overhead door closers for double-leaf doors with integrated, invisible closing sequence control are equipped with an electric hold-open function in the guide rail which allows continuous setting of the hold-open angle. When the system is combined with an external smoke switch control unit, the hold-open position is released in the event of a fire. These door closers are approved for use on fire and smoke protection doors.

TS 5000 R-ISM / TS 5000 L-R-ISM / TS 5000 L-R-ISM VP: Door closer with hold-open device and smoke switch control unit

This system solution for double-leaf doors with electric hold-open device on both sides and integrated smoke switch control unit is approved for use on fire and smoke protection doors. In the event of a fire, the smoke detector triggers and the door closes automatically. For opposite hinge side: TS 5000 L-R-ISM (standard or panic function on the active leaf only) and TS 5000 L-R-ISM VP (full panic requirements up to X dimension 100 mm).

TS 5000 R-ISM/0: Door closer with free swing function and smoke switch control unit

In the case of the system solution TS 5000 R-ISM/0 for double-leaf doors, the free swing function is realised using the R-ISM/0 guide rail and the TS 5000 EHY 3-6 door closer on the active leaf. The door must be opened once to approximately 90°. The passive leaf closes automatically thanks to the TS 5000 overhead door closer. In the event of a fire, the electric free swing function is released by the integrated smoke switch control unit and the door closes safely. Additionally, hold-open magnets can be fitted to the active and / or passive leaf in order to hold the respective leaf open.

GEZE OVERHEAD DOOR CLOSERS WITH LINK ARM

GEZE overhead door closers with link arm

Brief description of the variants

For single-leaf doors

From the smallest overhead door closer to numerous variations for use with fire and smoke protection doors: The door closer range with link arm offers versatile combination options. These have a closing force with variable adjustment and are suitable for right and left single-action doors without conversion being necessary.

TS 1000 C: Door closer with adjustable closing speed up to 950 mm leaf width

With the overhead door closer TS 1000 C, the closing speed and latching action can be adjusted. The variable closing force in two sizes is set by simply turning the bearing block for the link arm around.

TS 1500: Door closer with adjustable closing speed up to 1100 mm leaf width

With the overhead door closer TS 1500, the closing speed and latching action can be adjusted. The variable closing force in two sizes is set by simply turning the bearing block for the link arm around. It is optionally available with a mounting plate and is suitable for both right and left single-action doors without conversion.

TS 2000 NV: Door closer with variable closing force up to 1100 mm leaf width

With the overhead door closer TS 2000 NV with closing force with variable adjustment in accordance with DIN EN 1154 in sizes 2-4, the closing speed can conveniently be set from the front. The latching action is adjusted from the front using a valve.

TS 2000 V: Door closer with variable closing force up to 1250 mm leaf width

With the TS 2000 V overhead door closer with variable closing force in accordance with DIN EN 1154 in sizes 2/4/5, the closing speed can conveniently be set from the front. The latching action is adjusted using the link arm.

TS 4000: Door closer with back check

With the overhead door closer TS 4000, the closing force is set from the front. The back check and the thermo-stabilised closing speed with large visual closing force display can also be set from the front.

TS 4000 E: Door closer with electric hold-open device

This overhead door closer TS 4000 E with electric hold-open device is authorised for installation on fire and smoke protection doors in combination with an external smoke switch control unit. In the event of fire or a power failure, the hold-open function is released and the door closes safely. The closing force and the thermo-stabilised closing speed with large visual closing force display can easily be set from the front.

GEZE OVERHEAD DOOR CLOSERS WITH LINK ARM

TS 4000 R: Door closer with an integrated smoke switch

This overhead door closer with electric hold-open device and a smoke switch control unit integrated in the closer housing has been approved for installation on fire and smoke protection doors. In the event of a fire, the smoke detector triggers and the door closes automatically. When used on double-leaf doors, the TS 4000 R must be installed on the active leaf.

TS 4000 EFS: Door closer with hold-open device and free swing arm

The TS 4000 EFS overhead door closer is fitted with the free swing function. This enables people to go through the door by applying reduced physical force in the opening or closing direction once the door has been opened. When combined with an external smoke switch control unit the electric free swing function is released and the door closes automatically and safely in the event of a fire.

TS 4000 RFS: Door closer with free swing arm and smoke switch control unit

The TS 4000 RFS overhead door closer is equipped with an integrated smoke switch control unit and free swing function. This enables people to go through the door by applying reduced physical force in the opening or closing direction – e.g. in homes for the elderly or hospitals – after the door has been opened once, e.g. in the morning. The electric free swing function is released by the integrated smoke switch control unit and closes the door automatically and safely in the event of a fire.

TS 4000 Tandem: Door closer for very large and heavy doors

The TS 4000 Tandem is a combination comprising the TS 4000 EN 5-7 and the TS 4000 EN 1-6 door closers. The door closers are mounted on an adapter plate with joint axis. Suitable for leaf widths > 1600 mm with closing force > EN7.

For double-leaf doors

The double-leaf door closer systems of the IS series with integrated hydraulic closing sequence control are approved for installation on fire and smoke protection doors. The integrated closing sequence control with protection against intentional damage ensures the correct closing sequence of both door leaves for double-leaf doors. When the door is closed, the active leaf remains in waiting position until the passive leaf is closed and releases the active leaf via the closing sequence control. The closing force according to EN 1154 with visual closing force display and closing speed can be set from the front. The latching action is adjusted using the link arm.

TS 4000 IS: Door closer with integrated closing sequence control

The TS 4000 IS overhead door closer system with integrated hydraulic closing sequence control has been approved for installation on fire and smoke protection doors. Closing force in accordance with EN 1154 size 1-6 with visual closing force display and closing speed are set from the front.

TS 4000 E-IS: Door closer with integrated closing sequence control and electric hold-open device

The TS 4000 E-IS overhead door closer system with integrated hydraulic closing sequence control and electric hold-open device has been approved for installation on fire and smoke protection doors. The electric hold-open device can be variably adjusted from 80° to 175° in accordance with EN 1155. The closing force in accordance with EN 1154 size 1-6 with visual closing force display and closing speed can be adjusted from the front.

TS 4000 R-IS: Door closer with closing sequence control, hold-open device and smoke switch control unit

The TS 4000 R-IS overhead door closer system with electric hold-open device and integrated smoke switch control unit has been approved for installation on fire and smoke protection doors. In the event of a fire, the smoke detector triggers and the door closes automatically. The electric hold-open device can be variably adjusted from 80° to 175° in accordance with EN 1155. The closing force in accordance with EN 1154 size 1-6 with visual closing force display and closing speed can be adjusted from the front.

GEZE OVERHEAD DOOR CLOSERS

General product information about GEZE overhead door closers

Door closer sizes

acc. to EN 1154	Door leaf width in mm
Size 1	up to 750
Size 2	from 750 to 850
Size 3	from 850 to 950
Size 4	from 950 to 1100
Size 5	from 1100 to 1250
Size 6	from 1250 to 1400
Size 7	from 1400 to 1600

Notes for door closers with guide rail for installation on the opposite hinge side

Note: The max. door opening angle must be limited by a door stopper or by use of the GEZE T-Stop guide rail!

Special mounting dimensions are used when the X dimension is wider – on request.

Notes for door closers with link arm for installation on the opposite hinge side

- A = Reveal depth
 B = Reveal depth + 2 door thickness + 2 pivot point distance

Door opening up to 180° is only possible if the following dimensions are not exceeded:
 A = 70 mm and B = 200 mm

GEZE integrated door closers - Boxer series

Brief description of the variants

For single-leaf doors

The integrated Boxer door closer is installed completely in the door leaf and frame. The guide rail can only be seen when the door is open. The closing force in accordance with DIN EN 1154, the closing speed, the hydraulic latching action and the hydraulic back check can be adjusted conveniently from above when installed. For fire protection doors an additional suitability certificate is required with the door. The door opening angle must be limited to approx. 120°.

Boxer: Integrated door closer for 1-leaf doors

The integrated Boxer door closer for single-leaf doors in the versions EN 2-4 and EN 3-6 can be used for left and right single-action doors without conversion. The variant EN 2-4 2V additionally has an independent valve control for regulating the latching action speed. Thus, the door speed cannot only be increased, but the door can also be stopped within an opening angle of 10° and less.

Boxer E: Integrated door closer with electric hold-open device

The integrated door closer Boxer with electric hold-open device in the guide rail is suitable for single-leaf doors. The E guide rail with electric hold-open device has been tested in accordance with EN 1155. The retention force of the hold-open device has variable adjustment, the hold-open position can be set to between approx. 80° and 120°. The hold-open position can be overridden, i.e. the door can be opened wider if necessary.

Boxer EFS 4-6: Integrated door closer with electric free swing function

The integrated door closer Boxer EFS 4-6 allows barrier-free passage of single-leaf doors thanks to its free swing function. This enables people to go through the door by applying reduced physical force in the opening or closing direction – e.g. in homes for the elderly or hospitals – after the door has been opened once, e.g. in the morning. The door closer can be used for right and left single-action doors without conversion.

Boxer P: Integrated door closer for double-action doors

The integrated door closer Boxer 2-4 with double-action guide rail is suitable for use on lightweight double-action doors with low access frequency.

GEZE INTEGRATED DOOR CLOSERS

For double-leaf doors

The Boxer ISM system is designed for double-leaf doors and has an integrated mechanical closing sequence control, which ensures that the active leaf always closes after the passive leaf. When closing the active leaf whilst both leaves are open, it remains in waiting position until the passive leaf is closed and releases the active leaf via the closing sequence control. The system can be used for active leaf types DIN left or right without conversion. In addition, the closing sequence control of the ISM rail is extremely resistant to vandalism, i.e. the system is not damaged even if the active leaf is pushed intentionally to close out of the waiting position. The ISM guide rail is only visible when opening the door.

Boxer ISM: Door closer with integrated closing sequence control

The system GEZE Boxer ISM for double-leaf doors is made up of the Boxer 2-4 or Boxer 3-6 in the door leaves and the ISM guide rail with integrated mechanical closing sequence control in accordance with EN 1158 in the door frame.

Boxer E-ISM: Door closer with electric hold-open device

The system GEZE Boxer E-ISM for double-leaf doors is made up of the Boxer 2-4 or Boxer 3-6 in the door leaves and the E-ISM guide rail in the door frame. The guide rail is fitted with an integrated closing sequence control in accordance with EN 1158 and an electric hold-open device on both sides in accordance with EN 1155. The retention force of the hold-open devices and an electric, the hold-open position can be adjusted to between approx. 80° and 120°. The hold-open position can be overridden, i.e. the door can be opened wider if necessary.

Boxer ISM-EFS: Integrated door closer with free swing function

The system GEZE Boxer ISM-EFS for double-leaf doors is made up of the Boxer EFS 4-6 with free swing function on the active leaf, a Boxer 3-6 or 2-4 on the passive leaf and the ISM guide rail with integrated closing sequence control in accordance with EN 1158 in the door frame. The free swing function enables people to go through the active leaf by applying reduced physical force in the opening or closing direction – e.g. in homes for the elderly or hospitals – after the door has been opened once, e.g. in the morning.

GEZE floor springs

Brief description of the variants

For single-leaf doors

GEZE floor springs can be used to close single and double-action doors made of different materials in a reliable manner whilst remaining optically noteless. The product range includes systems for light and heavy leaf weights as well as door closers for use on fire and smoke protection doors.

TS 500 NV / TS 500 N EN 3: Floor springs for doors of up to 1100 mm

The TS 500 NV and TS 500 N EN 3 versions are two floor springs for use with doors with a maximum leaf width of 1100 mm. The very low overall height of just 42 mm is a welcome benefit for both new constructions and renovation projects.

TS 550 NV: Floor spring for frequently used and heavy doors

The TS 550 NV has been specifically further developed and is used for heavy single-leaf single-action and double-action doors. Its versatility and sturdiness make the TS 550 NV ideal for use in highly frequented areas.

TS 550 NV F: Floor spring for fire and smoke protection doors

The TS 550 NV F was developed for subtle installation on heavy-duty fire and smoke protection doors. The low installation height of only 54 mm makes it easy to fit, even to existing doors. The closing speed and hydraulic latching action can be adjusted. The integrated fixed back check prevents uncontrolled opening of the door. The closing force can be infinitely variable adjusted from above. The safety valve provides protection against intentional overload.

TS 550 NV E: Floor spring with electric hold-open device

The TS 550 NV E has been tested in accordance with DIN EN 1155 and can be held open in any position between 75° and 160° due to the electric hold-open device. This allows the door to be held open for any length of time. The closing speed and hydraulic latching action can be adjusted. The closing force can be infinitely variable adjusted from above. A safety valve helps to prevent intentional overloading. The closer is authorised for use with renowned smoke detector systems by DIBt (the German Centre of Competence for Construction).

TS 550 E-G / TS 550 F-G: Floor springs with lever and guide rail

These versions with lever and guide rail can be used for doors with carrying hinges. For both versions, the non-protruding spindle in conjunction with an extremely flat lever enables an opening angle of 180° with a floor clearance of 9 mm. A safety valve helps prevent intentional overloading. The electric hold-open device in accordance with DIN EN 1155 permits the TS 550 E-G to be held in any position between 80° and 150°.

For double-leaf doors

GEZE floor springs can be used to close single-action doors made of different materials in a reliable manner whilst remaining optical noteless. The floor springs for double-leaf doors are equipped with integrated closing sequence control according to EN 1158 or with additional electric hold-open device.

TS 550 IS: Floor spring with integrated closing sequence control

The TS 550 IS is used on double-leaf doors. A safety valve helps prevent intentional overloading. TS 550 IS is also suitable for leaves with unequal widths.

TS 550 E-IS: Floor spring with electric hold-open device

The electric hold-open device of the TS 550 E-IS allows double-leaf doors to be held open independently of one another at any angle between 80° and 175° for as long as desired. The closing speed and hydraulic latching action can be adjusted. The closing force can be infinitely variable regulated from above. A safety valve helps prevent intentional overloading. The closer is authorised for use with renowned smoke detector systems, and tested and certified by DIBt (the German Centre of Competence for Construction).

TS 550 IS-G / TS 550 E-IS-G: Floor springs with lever and guide rail

These floor spring versions with lever and guide rail can be used for double-leaf doors with carrying hinges. The non-protruding spindle in conjunction with an extremely flat lever enables an opening angle of 180° with a floor clearance of 9 mm. A safety valve helps prevent intentional overloading. The electric hold-open device in accordance with DIN EN 1155 permits the TS 550 E-IS-G to be held in any position between 80° and 150°.

POSSIBLE AREAS OF APPLICATION FOR GEZE PRODUCTS

Door technology

The functionality, superior performance and reliability of GEZE door closers are impressive. A common design across the range, the ability to use them on all common door leaf widths and weights, and the fact that they can be individually adjusted makes their selection simple. They are continually being improved and enhanced with up-to-date features. For example, the requirements of fire protection and accessibility are fulfilled with a door closer system.

Automatic door systems

GEZE automatic door systems open up a huge variety of options in door design. The latest, innovative high-performance drive technology, safety, ease of accessibility and first class universal drive design set them apart. GEZE offers complete solutions for individual requirements.

Smoke and heat extraction and window technology

GEZE smoke and heat extraction systems and ventilation technology provide complete systems solutions combining the many requirements of different types of windows. We supply a full range from energy efficient drive systems to natural ventilation and complete solutions for supplying and extracting air, also as certified SHEVs.

Safety technology

GEZE safety technology sets the standards where preventative fire protection, access control and anti-theft security in emergency exits are concerned. For each of these objectives GEZE offers tailored solutions, which combine the individual safety requirements in one intelligent system and close doors and windows in case of danger in a coordinated manner.

Building systems

In GEZE's Building Management System GEZE door, window and safety products can be integrated in to the security and control systems of the building. A central control and visualisation system monitors various automation components in the building and offers security through many different networking capabilities.

Glass systems

GEZE glass systems stand for open and transparent interior design. They can either blend discreetly into the architecture of the building or stand out as an accentuated feature. GEZE offers a wide variety of technologies for functional, reliable and aesthetic sliding wall or sliding door systems providing security with lots of design scope.
